EDUCATION

Instituto Tecnológico Autónomo de México (ITAM)

Computer Engineering

Graduated in May 2017

WORK EXPERIENCE

Microsoft

Redmond, WA, USA

Software Engineer II

03/2024 - Present

Iris Email and Push Services

- Built IrisMCP server to enable agentic solutions across Iris to access scenarios for content suggestions and campaign insights to support internal and external workflows. This solution consumes multiple data sources and APIs across the IDEAS/Iris space.
- Delivered Explainability pipelines adding model-driven content insights and campaign diagnostics; instrumented end-to-end telemetry and dashboards and produced partner-facing docs to help teams interpret delivery and engagement signals.
- Modernized CI/CD migrating classic releases to MOBRv2 YAML with IES templates and executing security actions—standardizing artifact signing and secret scanning, enforcing production-branch-only triggers and gated approvals, and adding compliance checks to harden pipelines; reduced manual cutover via templated jobs and shared library tasks.

Software Engineer

IDEAS/Syndeo

11/2022 – 02/2024

- Completed the migration for Campaign Metadata Manager, a portal that services all Microsoft products to create campaign ids.
- Integrated Exchange Email delivery for Campaigns Comms for Microsoft and external partners in Commercial scenario.
- Automated processes for creating and updating data consumed in Campaign Metadata Manager portal.

Outlook/Scheduler

11/2019 – 11/2022

- Contributed to the General Availability shipment of the Scheduler service for enterprise customers.
- Decoupled internal Scheduler services to be able to expose them as APIs to be consumed by other Outlook products.
- Improved algorithms in the time suggestions API consumed by Outlook Mobile in iOS and Web.
- Integrated flexible working hours to Find Meeting Times API to improve suggestions for remote workers.

Azure IDS

11/2018 – 11/2019

- Migrated the SDK build systems to be compiled for new platforms and processors, enabling partners like Defender adopt the new SDK version.
- Built the Objective-C wrapper for the C++ SDK to be consumed from partner teams on Mac.
- Implemented diagnostic-level event filtering on SDK using as default the diagnostic levels for Windows.
- Improved support for the C# wrapper used by several applications to send telemetry through the C++ layer.

SKILLS

PROGRAMMING LANGUAGES

5 years: C#
3.5 years: Java, TypeScript
2 years: Python, C/C++

AWARDS

ACM-ICPC Mexico and Central America Regional contestant in 2015
Honorable Mention at “Premio Apps Telefónica” in Mexico 2015
1st place at the “Reto Samsung SmartTV” in Mexico 2013
ACM-ICPC Mexico and Central America Regional contestant in 2013
